ABOUT EWARE

Industry Leader In Information and Communications Technology (ICT)

Founded in 2000, Eware Networks Limited is a leading ICT (Information and Communications Technology) solution provider in Hong Kong. We specialize in providing the latest network communication technologies to small to medium-sized enterprises (SME) in Hong Kong and Mainland China for achieving their business goals.

We offer a full range of network communication solutions that can help you boost productivity, expand your business in the marketplace, and ultimately increase profitability by the optimal use of the Internet.

Our team is comprised of highly skilled IT professionals from a diverse array of backgrounds. Our experience, expertise and methodologies allow us to deliver practical one-stop network communication solutions tailored to your specific industry and business requirements.

Our Mission

Eware is committed in offering the most advanced and cutting-edge technology to resolve network communication solutions for our clients. We are dedicated to satisfy our clients needs to increase their market competitiveness. In order to establish a lasting business relationship of trust with our clients, we would work hand in glove with our customers.

Six Core Businesses

IP Telephony

IP telephony allows users to talk with each other using almost any media, device or operating system on fixed and mobile networks. Also, IP telephony allows voice, video and data communication at any location and hence it supports unified communications. UAT works closely with the IP telephony service providers who bundles their IP telephony with Polycom audio systems. Our IP telephony partners includes:

Video Conferencing

Across environments and industries, video conference has become the new communication standard. Polycom telepresence and video conference systems are based on open standards, so they easily integrate with other existing systems.

We are one-stop video conference system provider who provides different video conference solution including telepresence immersive systems, room-based video conference systems, desktop video conference systems and mobile video conference solutions.

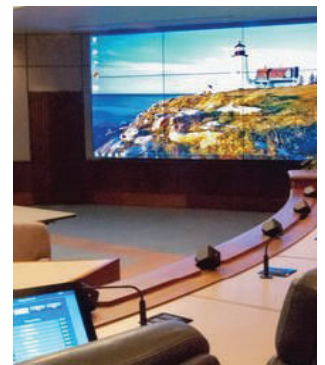

Audio Conferencing

Leveraging a revolutionary SIP architecture and virtualization technology, IP Telephony simplifies complex networks and reduces infrastructure costs. Employees at any location can be connected regardless of the infrastructure the endpoints reside on.

Audio Visual System

Whether presenting in meeting room, speaking via video link to a person on the other side of the world, people are reliant on high-quality, reliable and user-friendly audio visual technology. Eware provides expert consultancy to support our clients in clearly defining their needs, expectations and priorities, while working within their available budget.

Unified communications

Connect your teams with the experience they love, in the Office applications they use every day. Now, with Skype for Business you can simplify your infrastructure with one platform for calling, conferencing, video, and sharing.

Networking & Security

All online activities such as Web / FTP / IM / Mail (including browsed webpages, detailed dialogue, transferred files, contacters, and attachments) are recorded to prevent data leakage. ShareTech UR series also support multi-WANs and make use of in-built DNS for Outbound / Inbound load balance which assures a stable network.

Business Partners

Eware continually builds and expands its network of strategic partnerships with a range of technology and solutions partners. Each offers leading services that complement our own network communication solutions, allowing us to give our customers the power to realize the full potential of their businesses by offering an end-to-end solution.

Eware has already honorably joined partnership with the following companies:
